DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) do not apply to the examination of this application as the application being examined was not (1) filed on or after November 29, 2000, or (2) voluntarily published under 35 U.S.C. 122(b). Therefore, this application is examined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

1. Claims 22-24 are rejected under 35 U.S.C. 102(e) as being anticipated by Chen et al. (6,063,647).

Regarding Claim 22, Fig. 1A of Chen et al. show a circuit element 20p with a conductive pad 24, an adhesive layer 36 on the pad, a bump 30 located in an opening formed in the adhesive layer, bump 30 connected at its bottom face to the pad with a height greater than the thickness of the adhesive layer. Fig. 3B shows part of adhesive layer removed at the top portion of the bump 30 to expose bump 30 from the surface of the adhesive. Furthermore Chen et al. teach that the circuit element/network 20 can be flexible (see Column 4, lines 13-26 and 44-53), pad 24 can be made from metals such as copper (see Column 4, lines 53-63), bump 30 can be made of metal

Art Unit: 2826

(see Column 5, lines 22-27) and adhesive layer may be made of inorganic fillers (see Column 5, lines 53-64).

Regarding Claim 23, in Fig. 1A of Chen et al. pad 24 is patterned in a predetermined form.

Regarding Claim 24, Fig. 5E and 5F of Chen et al. show pad 125 of electronic device 121 connected with the end of bump 130.
